The PB-796 HD ES BF working with automatic 70 mm. hanger feeder

BINDING SYSTEM

TECHNICAL SPECIFICATIONS

400 V 3-phase 50/60 Hz + Neutral; 9Kw

6 Atm - 10 mc/hour

H 1300 x D 2400 x L 4500 mm.

2400 Kg

HOW IT WORKS

Calendars have simply to be placed onto the machine and collected at the end of the binding process. The machine punches the complete calendar in one stroke, then hangers and wire are inserted before everything is carried to the closing section to be bound. All this is done automatically. All punch pins are disconnectables from the front without taking out the tools from the machine, simply unscrewing a screw. The adjusting square system has been modified, reducing the change over times. Up to 50% reduction in paper size change over using the same wire diameter, up to 25% reduction in a complete change over of punching and binding size.

FEATURES

- Using wires on spools.
- Maximum binding size: 600 x 800 mm.
- Minimum binding size: 120 x 100 mm.
- Maximum punching thickness per stroke is 4,5 mm. (depending on pitch, materials and width of calendars).
- Standard binding diameters: 1/4" (on request 3/16", 5/16" and 3/8").
- Standard pitch 3:1" (on request 4:1").
- Speed variable 500 to 2500 pieces/hour depending on size, thickness and quality of materials.
- Can be programmed for continuous binding, two pieces of wire with hanger or "skip binding".
- Can be connected to any kind of collator.
- Remote control module for assistance.

OPTIONALS

- 3/16", 5/16" and 3/8" size tool sets.
- Additional automatic feeder for 70 mm. hangers (for calendars with two hangers).
- Automatic device for hangers from 100 to 450 mm. or for 100 to 300 mm.
- Punching tool for back perforation.
- Feeder for hangers on reels.
- Hanger former for 100-300 mm. and 100-450 mm. hangers.
- Automatic jogger.
- Connection unit with collating machines.
